## **DETAILED ACTION**

### ***Election/Restrictions***

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
  - I. Claims 1, 3, 8 and 10, drawn to an apparatus and method for displaying other vehicle position at own vehicle based upon a setting state, classified in class 340, subclass 825.08.
  - II. Claims 2 and 9, drawn to an apparatus and method for transmitting and displaying own position at another vehicle based upon a setting state, classified in class 340, subclass 990.
  - III. Claims 4, 5, and 11, drawn to a system and method for transmitting own vehicle position information via a communication service center for reception and display at another vehicle, classified in class 342, subclass 357.09.
  - IV. Claims 6 and 12, drawn to a system and method for receiving, via a service communication center, and displaying another vehicle position at own vehicle, classified in class 342, subclass 357.07.
  - V. Claims 13 and 14, drawn to an apparatus for determining own position and selectively transmitting the own position, classified in class 342, subclass 357.09.

The inventions are distinct, each from the other because of the following reasons:

2. Inventions I and II/III/IV/V are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, invention I has separate utility such as a self-contained

Art Unit: 3662

navigation unit which does not require any transmitter for a communication service center and merely receives positional data to avoid a collision. See MPEP § 806.05(d).

3. Inventions II and III/IV/V are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, invention II has separate utility such as a two-way walkie talkie that communicates its position directly to the other walkie-talkie. See MPEP § 806.05(d).

4. Inventions III and IV/V are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, invention III has separate utility such as a fleet monitoring network that broadcast all fleet vehicle positions so as to avoid collisions. See MPEP § 806.05(d).

5. Inventions IV and V are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, invention IV has separate utility such as a fleet monitoring network wherein a vehicle selectively requests positional information of another vehicle via a communication service network so as to allow own vehicle to aid the other vehicle by navigating thereto. See MPEP § 806.05(d).

6. Because these inventions are distinct for the reasons given above and the search required for each respective Group is not required for each of the other respective Groups, restriction for examination purposes as indicated is proper.

Art Unit: 3662

7. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.

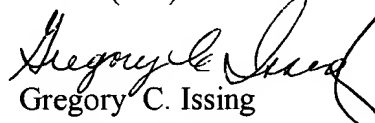

8. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
